Research Seminar & RTG Day

12.12.2023 (16:15 – 17:30, TU Dortmund Math Tower Room 127) – Wolfgang Keller
(University of Colorado Boulder/ NBER)

“Colocation of Production and Innovation: Evidence from the United States”
Is the decline of manufacturing behind new ideas getting harder to find? Shrinking manufacturing production in many advanced countries has raised concerns that the rate of innovation will fall as well because geographically proximate production may be a key input into innovation. This paper provides new evidence on the benefits from collocating innovation and production activities in the same firm. We also examine whether other firms benefit from the colocation of innovation in their region. Geo-coding all plants in US Census data, we provide the first decomposition of US innovation by firm type. We show, first, that manufacturing firms that have plants dedicated to innovation patent more than other manufacturing firms. Second, manufacturing firms with innovation plants close to their production facilities patent more than those with innovation plants further away. Possible implications for economic policy are discussed.

University DUISBURG-ESSEN

Campus Duisburg – MSM Research Seminars

13.12.2023 (16:30 – 17:30, LB 338) – Timothy King (University of Vaasa)
“Deterred or inspired by aspirant customers? Customers’ industry tournament incentives and supplier innovation (joint with Yaoyao Fan and Yichu Huang)”

Applying the logic of tournament theory, we explore the effect of customer CEOs’ industry tournament incentives (CITIs), captured by industry pay gap, on supplier innovation. Our main findings demonstrate that customer CITIs can enhance supplier innovation. This is evident in terms of the quantity, quality and efficiency of innovation, and are associated with a valuation premium for supplier firms. Moreover, we uncover a moderating effect for high-tech and large customers, whereby the positive impact of CITIs is more pronounced for high-tech customers but weakened for large customers. Finally, in an online appendix, we demonstrate that our results are robust to alternative models and addressing potential endogeneity concerns. Overall, our study contributes to interdisciplinary research in supply chain management and corporate outcomes by providing insight into the relevance of customers’ aspiration to supplier analysis and valuation
